ONLINE RESUME BUILDER

Introduction: -

An online resume builder is a software developed to simplify the task of creating a resume for individuals. The application provides an effective means of designing desired resume in fact a professional looking resume. The system is flexible to be used and reduces the need of thinking and designing an appropriate resume according to qualifications.

This project is user-friendly and requires minimum human intervention. Individuals just must fill up a form that specifies questions from all required fields such as personal questions, educational, qualities, interest, skills and so on. The answers provided by the users are stored and the system automatically generates a well-structured resume. Users have option to create resume in any format and file.

Features: -

- **Admin Login:** - Admin is the one who administers the system and input updates.
- **User Login:** - Users must create an account into the system by registering themselves. Then they may login into the system and can utilize services.
- **User registration:** - This module is used for new users. Already existing users can directly access the resume preparation, but in the case of new users they have to use the user registration module.
- **Resume Templates:** - The system contains various kinds of resume templates for all kind of qualification i.e. for both fresher and experienced. And also, according to the kind of degree one has.
- **Resume form:** - Users on selecting the format will be given an online form to be filled. The form includes questions like academics, personal, interests, hobbies, skills, courses, experience and so on.
- **Resume builder:** - On submitting the form the system stores the data and within a short period of time generates resume in selected format.
- **Choice of file:** User also given option to choose the kind of file they wish to create the resume i.e. in PDF file or word file.

- **Export facility:** Users can even export the file from word to PDF or vice-versa.

Existing System: -

The existing system of the resume builder is prepared in the MS-Word Application software. The Format which is designed is manual. But creating different resume formats is not easy. To reduce the burden, we have developed this software

The different processes involved are:

- To maintain the details like personal, educational and skills.
- To maintain the three default resume formats.
- Select appropriate one and display the data in required format.

Advantages:

- Provides instant resume to individuals.
- There are choices available for resume format for users as per their qualification and requirements.
- Reduces tedious work in thinking and creating resume and is convenient for users.
- Provides quick access and is affordable.
- The system saves time and reduces human efforts.

Disadvantages:

- It requires internet connection.
- Sometime user wants customized resume that is not possible in the system.

Applications:

- It can be used by fresher's or experienced persons to create resume.

Functional Requirements: -

- The system will have a portal for creating a new account and/or logging into an existing account.
- The system will allow users to enter or upload personal data.
- The system will allow users to update their profile information.

- The system will generate a complete resume after the user inputs information and chooses one or more templates.
- The system will store the user's information in secure database.

Recommended: -

- The system will have templates for different kinds of jobs.
- The system will allow users to modify resume styling.

Suggested: -

- The system will have read-only portal for employees to see a user's online resume.

Non-Functional Requirements: -

- The system will be reliable.
- The system will be secure.
- The system will be accessible.
- the system will be user-friendly.

Recommended: -

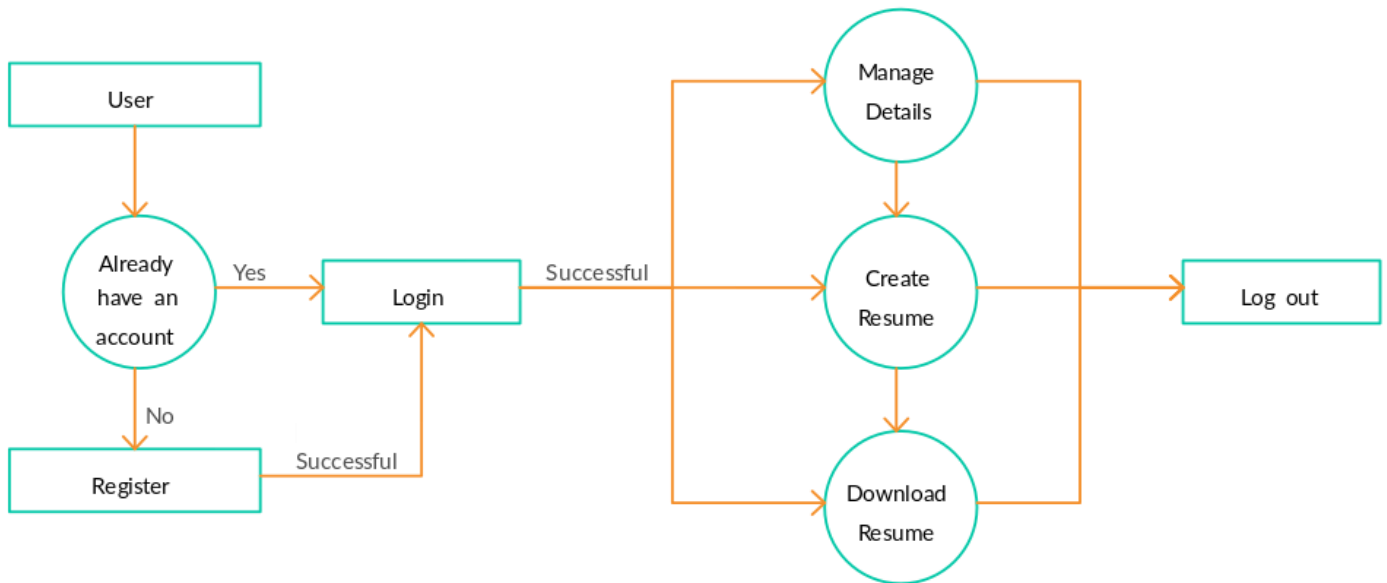

- The system will be visually pleasing.
- the system will be responsive.

Suggested: -

- the system will be well-documented.

Use cases: -

Use Cases demonstrate the possible actions a user can take. The listed narratives on the following pages go into greater detail regarding the goals and necessary pre- and postconditions of each action as well as any exceptions to these actions that may occur.

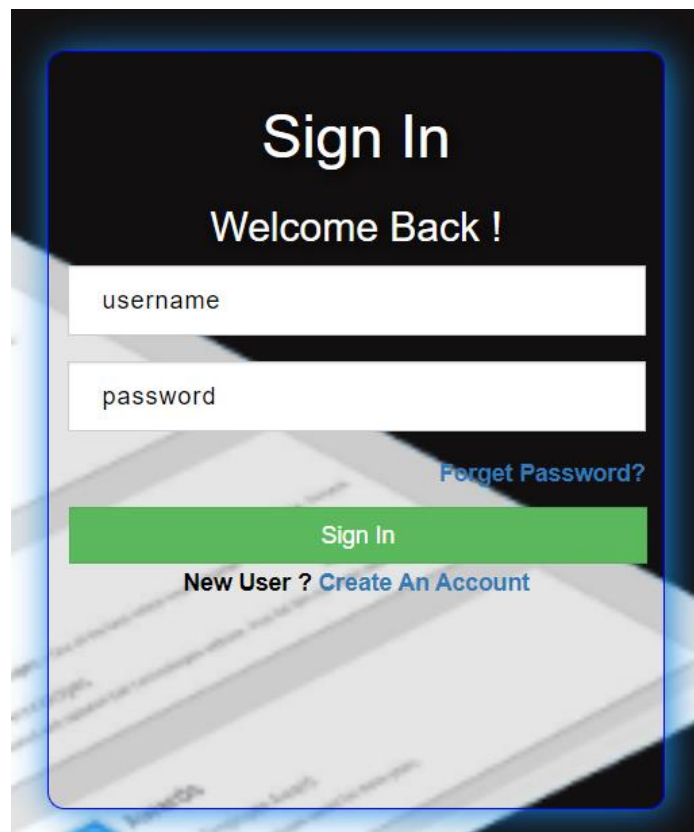

Technology Uses: -

1. **HTML:** - Markup Language for defining the structure of our web application.
2. **CSS:** - Stylesheet language used to determine the styling and behavior of HTML elements.
3. **BOOTSTRAP:** - Bootstrap is a framework for HTML/CSS/JavaScript that will save our team from doing some of the basic organization CSS.
4. **JAVASCRIPT:** We will use JavaScript for event listeners to change the interface of an infographic resume in real time.
5. **PHP:** Server-Side scripting language that can be user to access and send pull requests to a database.
6. **MYSQL:** - Relational database management system where user's resume and account information will be stored.

Home Page: -

Login Page: -

A login form titled "Sign In" with the subtitle "Welcome Back !". It features two input fields: "username" and "password". A blue link "Forget Password?" is positioned to the right of the password field. Below the fields is a green "Sign In" button. At the bottom, it says "New User ? [Create An Account](#)". The form is set against a dark background with a faint image of a document.
