

CAP454: LINUX AND SHELL SCRIPTING - LAB

L:0 T:0 P:2 Credits:1

Course Outcomes: Through this course students should be able to

- CO1 :: understand the booting, disk partitioning and installation process of Linux.
- CO2 :: understand how to connect with the network by configuring DHCP connection and DNS.
- CO3 :: use the file system utilities, shell scripting and shell programming.
- CO4 :: analyze the configuration of different Linux servers like samba, ftp, apache and nfs.

List of Practicals / Experiments:

Installation guidelines of RED HAT LINUX

- Installing Red Hat Linux
- Booting from CD/image
- Graphical Installation Launch
- Setting disk partition levels

Getting started with LINUX

- Swap Space
- Setting Boot Loader, First Boot
- Root user
- Working with desktop
- X windows
- Runlevels

Getting connected with network

- Network Configuration Tool
- DHCP connection
- DNS

Finding your way on the command line

- Performing Basic File System Management Tasks
- Working with Files and Directories
- Piping and Redirection
- Finding File
- Working with an Editor
- Vi Modes
- Using man to Get Help
- Using cat command
- Mounting Devices
- Links

Managing software using RPM

- Understanding RPM
- Compress your files

- Querying Software

Managing files and file system

- File Systems Overview
- Anatomy of file system
- File search utilities
- File and directories permissions

Working with users, groups and permissions

- Managing Users and Groups
- Commands for User Management
- Managing Passwords
- Modifying and Deleting User Accounts
- Behind the Commands: Configuration Files
- Creating Groups
- Using Graphical Tools for User and Group Management
- Managing Permissions
- Understanding the Role of Ownership
- Basic Permissions: Read, Write, and Execute
- Setting Default Permissions with umask

Introducing and working with shell

- Getting Started
- Elements of a Good Shell Script
- Executing the Script
- Working with Variables and Input
- Understanding Variables
- Common shell commands
- Shell Scripting programming constructs

Managing and configuring apache server

- Installing and configuring Apache web server
- Understanding the Apache Configuration Files
- Working with Virtual Hosts
- Setting up first web page
- Setting firewalls with iptables

Managing and configuring file servers

- FTP protocol
- Installing and configuring vsftpd
- Using FTP client to test anonymous read access
- Testing FTP server
- Installing and configuring Samba server
- Installing SAMBA server
- SAMBA configuration with SWAT and starting SWAT service
- Adding SAMBA user
- Creating and configuring SAMBA share

Working and configuring NFS

- Installing and configuring NFS
- Configuring NFS server and client
- Using auto mount services
- Examining NFS security

Text Books: 1. BEGINNING REDHAT LINUX 9 by SANDIP BHATTACHARYA, WILEY
